

## **The Liberty Sight**

The Liberty's bow riser has the sight bar extension built-in and has specially designed sights for the bow.. When you use other sights (all have a another 3.5" extension, total 7.0", and heavy mounting hardware on both ends). What you have in essence is two extension bars which greatly increase risk of damage to riser and sight. Also, non Liberty sights must be taken off to fit in case. Sight lights can be mounted by drilling a hole in the sight housing.

The New 3 pin Sight has 7" of fiber attached to a glow ring that doubles the fiber brightness (2 pins .019, other .029).

## **Arrow Rests**

Most other full containment rests work. We chose the Hostage and Whisker Biscuit because they are light and accurate. The arrow rests are set (adjusted) at the factory and should never have be re-adjusted Full containment rests are need because of the high let-off. When a 70 lb bow drops from 70 lb to 10.5 lb it sometimes bounces off the "V" type arrow rests. Consequently we use full containment.

With Liberty Sight and Hostage or Whisker Biscuit bow weight goes from 2.3 lbs to 2.55 lbs.
